

## Lab: JavaScript

1. Create a function that, when a button is clicked, displays the message "Lab JavaScript," and when the button is clicked again, the message disappears.(Hint: use if-else or toggle() )

Example:

2.Create 2 Class

2.1)Create Class Product:

- The Product class constructor should accept three parameters: name, price, and quantity.
- It should have a method getInfo() that returns the name, price, and quantity of the product.

2.2)Create Class Store:

- The Store class constructor should hold products.  
(Hint: this.products = [])
- It should have two methods:
  - The first method is addProduct(), which will add a product to the store.

- The second method is listAllProducts(), which will display all products.(Hint: use for-loop or for-each and then return the Info of each product )

Example:

Before add product:

**Shop**

Then we add product:

```
let water = new Product("Water", 10, 50);  
let bread = new Product("Bread", 15, 30);
```

# Shop

All Product:

Name: Water, Price: 10 Bath, Quabtity: 50

Name: Bread, Price: 15 Bath, Quabtity: 30
